CARE AND USE: - FIRECLAY SINKS

Fireclay sinks are extremely hard and virtually scratch resistant. They are extremely hygienic with an ultra smooth, dirt-repellent surface. Fireclay is fired at over 2200 degrees which is twice the firing temperature of cast iron products.

1. Under normal circumstances, regular use with dish soap will maintain a clean sink. For more stubborn stains, you may use a soft sponge or cloth and a mild abrasive.
2. To avoid water spotting, wipe down the sink after use.
